

M&M International - Production Capability

M&M International have been manufacturing solenoid valves for almost 30 years. Over this period we have built up extensive knowledge of the product, critical features and processes that affect the performance of product.

Quality and customer service are of paramount importance to M&M International and to support this we have invested heavily over the past 10 years in the latest technology including CNC lathes and finishing machines, CMM inspection and automatic and semi automatic assembly and test stations to support our constant drive to fulfil our customers expectations and guarantee a high performance, high quality product. We currently manufacture over 85% of the components used in the manufacture our products and our facilities include machining of bodies and internals, welding of armatures, production of coils and assembly and test of finished products. M&M operates stringent testing of

all products including 100% testing of all armature welded joints prior to final assembly, 6 point testing of all manufactured coils as well as 100% final product function and leakage testing.

M&M International is ISO 9001/2000 certified by DNV and has detailed quality system to support the goals of the company.
